Corporate Restructuring Through Subhasis Halder 2014-03 In the present era of LPG (Liberalization, Privatization and Globalization), the term 'Corporate Restructuring' has gained a huge acceptance, globally, as it enables a firm to restructure its business mainly from financial and organizational standpoints with a view to increasing its efficiency and profitability and thereby achieving its short-term as well as long-term goals. In India, corporate restructuring also gets an enormous popularity as it results into availing huge amount of tax benefit, increasing corporate control and enhancing shareholders' value for the Indian corporate enterprises. The main objective of the study is to make a case study based analysis of the Corporate Restructuring through demerger in India and to analyze the impact of such corporate practice on various aspects of an organization namely, its impact on EPS, DPS, ROCE, RONW, EVA, MVA, SVA as well as its influence on Share Prices. For analyzing the impact of demerger

on companies share prices, the concept of sub-periodic growth rates has been applied by employing 'Kinked Exponential Model'. In order to facilitate all type of analysis, the 'Control Sample Methodology' has been applied.

The Politics of Economic Restructuring in India Loraine Kennedy 2013-12-17 State re-scaling is the central concept mobilized in this book to interpret the political processes that are producing new economic spaces in India. In the quarter century since economic reforms were introduced, the Indian economy has experienced strong growth accompanied by extensive sectoral and spatial restructuring. This book argues that in this reformed institutional context, where both state spaces and economic geographies are being rescaled, subnational states play an increasingly critical role in coordinating socioeconomic activities. The core thesis that the book defends is that the reform process has profoundly reconfigured the Indian state's rapport with its territory at all spatial scales, and these processes of state spatial rescaling are crucial for comprehending emerging patterns of economic governance and growth. It demonstrates that the outcomes of India's new policy regime are not only the product of impersonal market forces, but that they are also the result of endogenous political strategies, acting in conjunction with the territorial reorganisation of economic activities at various scales, ranging from local to global. Extensive empirical case material, primarily from field-based research, is used to support these theoretical assertions. Scholars of political economy, political and economic geography, industrial development, development studies and Asian Studies will find this a stimulating and innovative contribution to the study of the political economy in the developing countries.

ReOrg Stephen Heidari-Robinson 2016-10-25 A Practical Guide in Five Steps Most executives will lead or be a part of a reorganization effort (a reorg) at some point in their careers. And with good reason—reorgs are one of the best ways for companies to unlock latent value, especially in a changing business environment. But everyone hates them. No other management practice creates more anxiety and fear among employees or does more to distract them from their day-to-day jobs. As a result, reorgs

can be incredibly expensive in terms of senior-management time and attention, and most of them fail on multiple dimensions. It's no wonder companies treat a reorg as a mysterious process and outsource it to people who don't understand the business. It doesn't have to be this way. Stephen Heidari-Robinson and Suzanne Heywood, former leaders in McKinsey's Organization Practice, present a practical guide for successfully planning and implementing a reorg in five steps—demystifying and accelerating the process at the same time. Based on their twenty-five years of combined experience managing reorgs and on McKinsey research with over 2,500 executives involved in them, the authors distill what they and their McKinsey colleagues have been practicing as an “art” into a “science” that executives can replicate—in companies or business units large or small. It isn't rocket science and it isn't bogged down by a lot of organizational theory: the five steps give people a simple, logical process to follow, making it easier for everyone—both the leaders and the employees who ultimately determine a reorg's success or failure—to commit themselves to and succeed in the new organization.

Restructuring of State-Owned Financial Institutions Hans Dieter Seibel 2009-09-01 Despite the trend toward financial sector liberalization in recent years, state ownership of financial institutions remains widespread in the developing world. However, in general, state-owned financial institutions have underperformed their private sector counterparts, and governments have sought to restructure them. This case study reviews the transformation of Bank Rakyat Indonesia from a loss-producing, overstuffed state-owned bank to the most profitable bank with the largest microbanking network in Indonesia. From the bank's experience the study seeks to draw decisive lessons for the successful transformation of other state-owned financial institutions. For Bank Rakyat Indonesia, the key driver of successful reform was the government's commitment to allow it the autonomy to restructure itself-including an emphasis on good corporate governance, supported by appropriate regulations and effective supervision.

The Nature of Diversified Business Groups Pankaj Ghemawat 1996 Diversified business groups dominate the private sectors of most of the world's economies. Several of these economies have undergone sudden policy changes that significantly increase competitive intensity. We demonstrate how the changes in corporate scope that accompany such "competitive shocks" can be used to choose among several candidate explanations for the existence of groups. We illustrate our reasoning by studying the restructuring of two of India's largest business groups following a comprehensive post-1991 reform package that can be construed as a competitive shock. The case studies suggest conceptualizing the business group as an organizational mechanism designed to allocate a scarce resource across multiple lines of business and guide the development of simple models that illustrate how changes in the value of such a resource (following a competitive shock), and changes in ambient competitive intensity, affect corporate scope. The case studies also expose a rich array of restructuring options that should

inform larger-sample empirical analyses

International Competitiveness, Investment and Finance A Ganesh-Kumar 2003-09-02 Using India as a case study, this well-written, concise book covers everything one needs to know to understand how a country becomes internationally competitive. Showing that reforms that pertain to the real sector alone, such as industrial deregulation and trade reforms, are not enough to enhance a country's competitiveness, this book makes a compelling case for complimentary financial sector reforms. Of interest to academics studying international trade, industrial economics and development economics, this book is also guaranteed to be extremely useful for professional economists and those involved with policy making in developed and developing countries.

Wealth Creation in the World's Largest Mergers and Acquisitions B. Rajesh Kumar 2018-11-29 This book highlights research-based case studies in order to analyze the wealth created in the world's largest mergers and acquisitions (M&A). This book encourages cross fertilization in theory building and applied research by examining the links between M&A and wealth creation. Each chapter covers a specific case and offers a focused clinical examination of the entire lifecycle of M&A for each mega deal, exploring all aspects of the process. The success of M&A are analyzed through two main research approaches: event studies and financial performance analyses. The event studies examine the abnormal returns to the shareholders in the period surrounding the merger announcement. The financial performance studies examine the reported financial results of acquirers before and after the acquisition to see whether financial performance has improved after merger. The relation between method of payment, premium paid and stock returns are examined. The chapters also discuss synergies of the deal-cost and revenue synergies. Mergers and acquisitions represent a major force in modern financial and economic environment. Whether in times of boom or bust, M&As have emerged as a compelling strategy for growth. The biggest companies of modern day have all taken form through a series of restructuring activities like multiple mergers. Acquisitions continue to remain as the quickest route companies take to

operate in new markets and to add new capabilities and resources. The cases covered in this book highlights high profile M&As and focuses on the wealth creation for shareholders of acquirer and target firms as a financial assessment of the merger's success. The book should be useful for finance professionals, corporate planners, strategists, and managers.

Pro-ecological Restructuring of Companies Aleksandra G?nior 2020-10-09 "This book presents a practical approach to pro-environmental challenges faced by companies in the process of restructuring. It contains a broad variety of case studies from different economic sectors, and small and large businesses, in four European countries: Ukraine, Romania, Germany and Poland. The studies are the results of surveys of companies that had either already restructured or were planning to, and reveal both the weaknesses and strengths in these practices. The book is divided into three parts: explorations of how political and legal factors are embedded in a company's strategy and how they influence the company's behaviour; analyses of companies' activities on matching restructuring with ecology; and approaches to ecoinnovations within the companies. The case studies throughout the book show that the restructuring of a company is an opportunity for the implementation of proecological action and "green" business models. The authors trust that the experiences and good practices of others will prove valuable both for future businessmen (i.e. students), but also for academics and representatives of local government, central environmental agencies, owners and managers of enterprises to be restructured." Case studies reveal that the costs of corporate sector rescue are significant and in several cases on par with the costs of financial sector bailouts. The paper sheds light on the importance of contingent liabilities and associated risks to government balance sheet from the corporate debt side and emphasizes the need for improved contingency planning for corporations with potential systemic impact.

Indian Business Case Studies Volume VIII Srilatha Palekar 2022-06-15 It has been decades since many business schools outside India adopted the case study methodology for teaching almost all branches of management studies. This trend has been seen in India, too, where top management institutes have implemented the case study-based methodology as an important pedagogical tool in business education. The major issue in India, however, is a severe shortage of Indian case studies through which business schools can provide industry insights to students. This volume fills that gap. It has twenty Indian cases

related to different aspects of business management. The cases cover some of the prominent disciplines of management like marketing, finance, human resource management, strategy management, operations management, accounting, and mergers and acquisitions. These cases best serve the purpose of adoption of 'case methodology' in classroom teaching or online lecture sessions for the faculty and students of business management.

Organizational Restructuring S Jeyavelu 2011-08 Globally organizations look at restructuring to increase competitiveness and enhance performance under uncertain business environment. Indian organizations started restructuring in response to the new economic policies introduced in the early 1990s. Surveys in 1990s found that many Indian organizations had restructured or were planning to do so. This book documents the experiences of restructuring in Indian organizations. A grounded triangulation design was adopted with case studies followed by a questionnaire survey. Two case studies were conducted with in depth interviews and analysis of secondary data. The questionnaire survey was conducted in fifty organizations using two questionnaires, one each for top and senior management. Findings suggest that managers have choices in terms of processes used during restructuring; the extent of change and processes depend on the environmental uncertainty and past organizational effectiveness; and effective restructuring is harmonious alignment of changes in organizational characteristics. The study supports strategic choice theory and extends contingency/configuration theory to restructuring configurations.
