Devour the Land Makeda Best 2021-09-28 Tracing the impacts of militarism on the American landscape, through the lens of art, environmental studies, and politics *Devour the Land* considers how contemporary photographers have responded to the US military's impact on the domestic environment since the 1970s, a dynamic period for environmental activism as well as for photography. This catalogue presents a lively range of voices at the intersection of art, environmentalism, militarism, photography, and politics. Alongside interviews with prominent contemporary artists working in the landscape photography tradition, the images speak to photographers' varied motivations, personal experiences, and artistic approaches. The result is a surprising picture of the ways violence and warfare surround us. Although most modern combat has taken place abroad, the US domestic landscape bears the footprint of armed conflict--much of the environmental damage we live with today was caused by our own military and the expansive network of industries supporting its work. Designed to evoke a field book and to nod toward ephemera produced by earlier artists and activists, the catalogue features works by dozens of photographers, including Ansel Adams, Robert Adams, Dorothy Marder, Alex Webb, Terry Evans, and many more.

*Privacy is Power* Carissa Véliz 2020-09-24 An Economist BEST

**BOOK OF THE YEAR** As the data economy grows in power, Carissa Véliz exposes how our privacy is eroded by big tech and governments, why that matters and what we can do about it. The moment you check your phone in the morning you are giving away your data. Before you've even switched off your alarm, a whole host of organisations have been alerted to when you woke up, where you slept, and with whom. As you check the weather, scroll through your 'suggested friends' on Facebook, you continually compromise your privacy. Without your permission, or even your awareness, tech companies are harvesting your information, your location, your likes, your habits, and sharing it amongst themselves. They're not just selling your data. They're selling the power to influence you. Even when you've explicitly asked them not to. And it's not just you. It's all your contacts too. Digital technology is stealing our personal data and with it our power to make free choices. To reclaim that power and democracy, we must protect our privacy. What can we do? So much is at stake. Our phones, our TVs, even our washing machines are spies in our own homes. We need new regulation. We need to pressure policy-makers for red lines on the data economy. And we need to stop sharing and to adopt privacy-friendly alternatives to Google, Facebook and other online platforms. Short, terrifying, practical: *Privacy is Power* highlights the implications of our laid-back attitude to data and sets out how we can take back control. If you liked *The Age of Surveillance Capitalism*, you'll love *Privacy is Power* because it provides a philosophical perspective on the politics of privacy, and it offers a very practical outlook, both for policymakers and ordinary citizens.

*Guide to the GDPR* Maciej Gawronski 2019-07-17 To execute and guarantee the right to privacy and data protection within the European Union (EU), the EU found it necessary to establish a stable, consistent framework for personal data protection and to enforce it in a decisive manner. This book, the most comprehensive guide available to the General Data Protection Regulation (GDPR), is the first English edition, updated and expanded, of a bestselling book published in Poland in 2018 by a renowned technology lawyer, expert to the European Commission on cloud computing and to the Article 29 Working Party (now: the European Data Protection Board) on data transfers who in fact contributed ideas to the GDPR. The implications of major innovations of the new system – including the obligation of businesses to consult the GDPR first rather than relevant Member State legislation and the extension of the GDPR to companies located outside of the European Economic Area – are fully analysed for the benefit of lawyers and companies worldwide. Among the specific

issues and topics covered are the following: insight into the tricky nature of the GDPR; rules relating to free movement of personal data; legal remedies, liability, administrative sanctions; how to prove compliance with GDPR; direct liability of subcontractors (sub-processors); managing incidents and reporting data breaches; information on when and under what conditions the GDPR rules may apply to non-EU parties; backups and encryption; how to assess risk and adjust security accordingly and document the process; guidelines of the European Data Protection Board; and the GDPR's digest for obligated parties in a form of a draft data protection policy. The Guide often breaks down GDPR articles into checklists of specific requirements. Of special value are the numerous ready-to-adapt template compliance documents presented in Part II. Because the GDPR contains a set of new obligations and a perspective of severe administrative fines for non-compliance, this guide is an indispensable practical resource for corporate data protection officers, in-house counsel, lawyers in data protection practice, and e-commerce start-ups worldwide.

our democratic ideals, and our overall well-being.

Applied Rheology Thomas G. Mezger 2015

EU Competition Law, Data Protection and Online Platforms: Data as Essential Facility Inge Graef 2016-10-17 All are agreed that the digital economy contributes to a dynamic evolution of markets and competition. Nonetheless, concerns are increasingly raised about the market dominance of a few key players. Because these companies hold the power to drive rivals out of business, regulators have begun to seek scope for competition enforcement in cases where companies claim that withholding data is needed to satisfy customers and cut costs. This book is the first focus on how competition law enforcement tools can be applied to refusals of dominant firms to give access data on online platforms such as search engines, social networks, and e-commerce platforms – commonly referred to as the ‘gatekeepers’ of the Internet. The question arises whether the denial of a dominant firm to grant competitors access to its data could constitute a ‘refusal to deal’ and lead to competition law liability under the so-called ‘essential facilities doctrine’, according to which firms need access to shared knowledge in order to be able to compete. A possible duty to share data with rivals also brings to the forefront the interaction of competition law with data protection legislation considering that the required information may include personal data of individuals. Building on the refusal to deal concept, and using a multidisciplinary approach, the analysis covers such issues and topics as the following: – data portability; – interoperability; – data as a competitive advantage or entry barrier in digital markets; – market definition and dominance with respect to data; – disruptive versus sustaining innovation; – role of intellectual property regimes; – economic trade-off in essential facilities cases; – relationship of competition enforcement with data protection law and – data-related competition concerns in merger cases. The author draws on a wealth of relevant material, including EU and US decision-making practice, case law, and policy documents, as well as economic and empirical literature on the link between competition and innovation. The book concludes with a proposed framework for the application of the essential facilities doctrine to potential forms of abuse of dominance relating to data. In addition, it makes suggestions as to how data protection interests can

be integrated into competition policy. An invaluable contribution to ongoing academic and policy discussions about how data-related competition concerns should be addressed under competition law, the analysis clearly demonstrates how existing competition tools for market definition and assessment of dominance can be applied to online platforms. It will be of immeasurable value to the many jurists, business persons, and academics concerned with this very timely subject.

Accountability in the Economic and Monetary Union Menelaos Markakis 2020-04-02 Following the financial and public debt crisis, the EU's Economic and Monetary Union (EMU) has been under intense political scrutiny. The measures adopted in response to the crisis have granted additional powers to the EU (and national) authorities, the exercise of which can have massive implications for the economies of the Member States, financial institutions and, of course, citizens. The following questions arise: how can we hold accountable those institutions that are exercising power at the national and EU level? What is the appropriate level, type and degree of accountability and transparency that should be involved in the development of the EU's governance structures in the areas of fiscal and economic governance and the Banking Union? What is the role of parliaments and courts in holding those institutions accountable for the exercise of their duties? Is the revised EMU framework democratically legitimate? How can we bridge the gap between the citizens - and the institutions that represent them - and those institutions that are making these important decisions in the field of economic and monetary policy? This book principally examines the mechanisms for political and legal accountability in the EMU and the Banking Union. It examines the implications that the reforms of EU economic governance have had for the locus and strength of executive power in the Union, as well as the role of parliaments (and other political fora) and courts in holding the institutions acting in this area accountable for the exercise of their tasks. It further sets out several proposals regarding transparency, accountability, and legitimacy in the EMU.

The Role of Media Pluralism in the Enforcement of EU Competition Law Konstantina Bania 2019-03 In an era of communicative

abundance, consumers can access content anytime, anywhere and on any digital device. Safeguarding media pluralism has never before been as essential to our democracies as it is today. What role, if any, should EU competition law then play in protecting it? In delving into this question, Konstantina Bania conducts an in-depth analysis of the economics of the sector as well as the Commission's decision-making practice regarding mergers, abuses of dominance as well as anti-competitive agreements. Combining unique theoretical and practical insights, this book showcases novel tools for competition law enforcement to protect quality dimensions of competition and consumer welfare in media markets where consumers increasingly pay with their attention or data rather than money. This book is a must-read study for all scholars, competition authorities and policymakers interested in the question of how competition law can apply in such a manner that antitrust and merger assessments do not disregard non-price concerns such as privacy or diversity.

Subprime Attention Crisis Tim Hwang 2020-10-13 From FSGO x

Logic: a revealing examination of digital advertising and the internet's precarious foundation In *Subprime Attention Crisis*, Tim Hwang investigates the way big tech financializes attention. In the process, he shows us how digital advertising—the beating heart of the internet—is at risk of collapsing, and that its potential demise bears an uncanny resemblance to the housing crisis of 2008. From the unreliability of advertising numbers and the unregulated automation of advertising bidding wars, to the simple fact that online ads mostly fail to work, Hwang demonstrates that while consumers' attention has never been more prized, the true value of that attention itself—much like subprime mortgages—is wildly misrepresented. And if online advertising goes belly-up, the internet—and its free services—will suddenly be accessible only to those who can afford it. Deeply researched, convincing, and alarming, *Subprime Attention Crisis* will change the way you look at the internet, and its precarious future. FSG Originals x Logic dissects the way technology functions in everyday lives. The titans of Silicon Valley, for all their utopian imaginings, never really had our best interests at heart: recent threats to democracy, truth, privacy, and safety, as a result of tech's reckless pursuit of progress, have shown as much. We present an alternate story, one that delights in capturing technology in all its contradictions and innovation, across borders and socioeconomic divisions, from history through the future, beyond platitudes and PR hype, and past doom and gloom. Our collaboration features four brief but provocative forays into the tech industry's many worlds, and aspires to incite fresh conversations about technology focused on nuanced and accessible explorations of the emerging tools that reorganize and redefine life today.
